

Scenario descriptions

Scenario 1 – Faint Hearted

Generally business as usual, some minor attempts to decarbonise the grid and continued slow energy efficiency update.

Scenario 2 – Low Carbon Reference

The government invests in partial decarbonisation of the grid through reduced dependence on fossil fuels. Large investment in energy efficiency and small scale renewable, some change in occupant behaviour.

Scenario 3 – Super Ambitious

The government invests in full decarbonisation of the grid through renewable and nuclear and huge investment in energy efficiency and small scale renewable. Large scale change in occupant behaviour
